- 3** Top Pennsylvania companies

VERTICAL TRANSPORTATION DESIGN

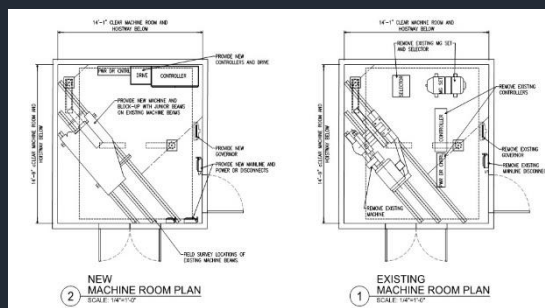

ECSI360 utilizes inhouse engineers and tradespeople with heavy experience in facilities maintenance and service. Our inhouse personnel can quickly determine the design intent of the clients while understanding the field conditions and cost implications of various design options. Our team for the past ten years has partnered with Pennoni Engineering to provide MEPF and vertical transportation designs. Collectively, we have worked on multiple high-profile projects such as: USDA Wynnewood Elevator Design, The Escalators and Elevators at SEPTA Concourses in Center City Philadelphia, Elevators at the School District of Philadelphia Headquarters, where we are also the MEPF maintenance contractor.

ELEVATOR MAINTENANCE AND SERVICE

ECSI360 ensures that its clients vertical transportation systems are always available. Our company was the auditor for the central plant and vertical transportation systems for the two million square foot Pennsylvania Convention Center. During that time our firm provided recommendations that saved millions of dollars in costs and protected revenue by ensuring that the two main escalators in the building were properly maintained. Our technicians have all of the needed certification and training to ensure that clients are protected 24/7 throughout the mid-atlantic region. Our work order technology and asset management solutions provide predictive maintenance that resolves issues before they become a major emergency.
